

PancakeSwap veCAKE

BNB Smart Chain

Ethereum

Aptos

Arbitrum

zkSync

Base

opBNB

Linea

Polygon zkEVM

tl;dr:

Build deep, multi-chain liquidity via CAKE incentives:

1. In v3 concentrated liquidity and/or StableSwap pools
2. On BNB, ETH, APT, ARB, ZkSync, Base, OpBNB, Linea, and/or Polygon zkEVM

benefiting your project via:

- (i) increased traffic and user flow, and
- (ii) improved volume and market metrics

How can I get CAKE incentives?

1. Lock CAKE as veCAKE on BNB Chain, vote for your desired gauges

2. Bribe on any veCAKE Manager to influence others to vote for your desired gauges

1. Long run, locking CAKE is more cost-efficient, though it has slightly higher initial outlay
2. Bribing usually provides **>1x efficiency** (bribe \$1 to get >\$1 in CAKE emissions), but must be done fortnightly to sustain CAKE emissions
3. For the latest bribe efficiency or other relevant data, ask us! We're happy to share

What's next?

1. Apply for gauges whitelisting on our Forum. Estimated time to complete: **10 minutes**.

Locking CAKE

- 2a. Lock CAKE as veCAKE [here](#). You may lock anywhere between 1 week and 4 years.
- 3a. Vote for your desired gauges to receive CAKE emissions.

Bribing

- 2b. Bribe on one of our veCAKE Managers. If you let us know your budget, we can rally the veCAKE Managers to contact you directly and share more details with you.

- 3b. Allow vlCKP holders / sdCAKE holders / veCAKE holders to vote for your gauges to collect your bribe.

4. Once the epoch ends on Thursday, the Farms that distribute CAKE will go live on the coming **Friday**, late European time.
5. Please **share on your socials** once the Farms are live – we'll help to amplify!

Ping us if you have any questions!
We're always happy to assist :)
